

Quiz 3

Name and Surname : Muhammed Enes Yavuz

Identity Number : 21989712

Client has a VendorType. VendorType is an interface. VendorOne and VendorTwo implements VendorType. Client is a superclass and its subclasses are TravelWithLimousineClient, TravelWithBusClient, TravelWithCarClient, TravelWithShuttleClient, TravelWithTaxiClient. In the main class we create new object with polymorphism "Client type = new **TravelType**(new **VendorType**());" like this. In the vendor classes we can control type of transportation with instanceof and print screen to type, route and time.
